B.E (FT) END SEMESTER EXAMINATIONS – MAY/ JUNE 2024

Computer Science and Engineering

VI Semester

CS6301 - MACHINE LEARNING

(Regulation 2018 - RUSA)

**Time: 3 Hours****Max. Marks 100**

CO 1	To understand the need for machine learning for various types of problem solving
CO 2	To know the mathematics involved in various machine learning algorithms
CO 3	To study the various supervised, semi-supervised, and unsupervised learning algorithms in ML
CO 4	To learn about probabilistic models in machine learning
CO 5	To have a glimpse of the latest developments in machine learning

BL – Bloom's Taxonomy Levels (L1 - Remembering, L2 - Understanding, L3 - Applying, L4 - Analysing, L5 - Evaluating, L6 - Creating)

Answer ALL Questions**PART-A (10 x 2 = 20 Marks)**

		Marks	CO	BL
1.	Define distinct instances, syntactically distinct hypotheses and semantically distinct hypotheses.	2	CO1	L1
2.	What is Local Minima in MLP? How to avoid it?	2	CO1	L2
3.	A Doctor wants to diagnose the patient for infection viral or Bacterial based on CRP and Temperature. How will McCulloch & Pitt's Model take a decision?	2	CO1	L3
4.	What is Local mapping in RBF?	2	CO2	L2
5.	Differentiate between Isomap & Locally Linear Embedding	2	CO2	L2
6.	What is the idea behind KD Tree? State its purpose	2	CO4	L3
7.	What is the drawback of Roulette Wheel selection Method? Mention how it can be resolved	2	CO2	L4
8.	Differentiate Exploration & Exploitation in RL	2	CO3	L1
9.	Define Decision stump	2	CO3	L1
10.	If the kernel size is 3x3, Calculate the amount of Padding P	2	CO4	L5

PART – B (8 x 8 = 64 marks)
(Answer any 8 questions)

			Marks	CO	BL																																			
11.		<p>Consider the training samples given below: Generate the version space and provide a hand trace of the Candidate Elimination Algorithm by stating the algorithm.</p> <table><tr><th>Eg.</th><th>Shape</th><th>Size</th><th>Color</th><th>Surface</th><th>Thickness</th><th>Target</th></tr><tr><td>1</td><td>Circular</td><td>Large</td><td>Light</td><td>Smooth</td><td>Thick</td><td>Malignant(+)</td></tr><tr><td>2</td><td>Circular</td><td>Large</td><td>Light</td><td>Irregular</td><td>Thick</td><td>Malignant(+)</td></tr><tr><td>3</td><td>Oval</td><td>Large</td><td>Dark</td><td>Smooth</td><td>Thin</td><td>Benign(-)</td></tr><tr><td>4</td><td>Oval</td><td>Large</td><td>Light</td><td>Irregular</td><td>Thick</td><td>Malignant(+)</td></tr></table>	Eg.	Shape	Size	Color	Surface	Thickness	Target	1	Circular	Large	Light	Smooth	Thick	Malignant(+)	2	Circular	Large	Light	Irregular	Thick	Malignant(+)	3	Oval	Large	Dark	Smooth	Thin	Benign(-)	4	Oval	Large	Light	Irregular	Thick	Malignant(+)	8	CO1	L5
Eg.	Shape	Size	Color	Surface	Thickness	Target																																		
1	Circular	Large	Light	Smooth	Thick	Malignant(+)																																		
2	Circular	Large	Light	Irregular	Thick	Malignant(+)																																		
3	Oval	Large	Dark	Smooth	Thin	Benign(-)																																		
4	Oval	Large	Light	Irregular	Thick	Malignant(+)																																		
12.	i)	<p>Consider the given data. Apply the linear regression technique to examine the relationship between Car Age & Price and predict Price for Car Age = 6 & X= 15.</p> <table><tr><th>Car Age (in Years)</th><th>Price (in Dollars)</th></tr><tr><td>4</td><td>6300</td></tr><tr><td>4</td><td>5800</td></tr><tr><td>5</td><td>5700</td></tr><tr><td>5</td><td>4500</td></tr><tr><td>7</td><td>4500</td></tr><tr><td>7</td><td>4200</td></tr><tr><td>8</td><td>4100</td></tr><tr><td>9</td><td>3100</td></tr><tr><td>10</td><td>2100</td></tr><tr><td>11</td><td>2500</td></tr><tr><td>12</td><td>2200</td></tr></table>	Car Age (in Years)	Price (in Dollars)	4	6300	4	5800	5	5700	5	4500	7	4500	7	4200	8	4100	9	3100	10	2100	11	2500	12	2200	4	CO1	L5											
Car Age (in Years)	Price (in Dollars)																																							
4	6300																																							
4	5800																																							
5	5700																																							
5	4500																																							
7	4500																																							
7	4200																																							
8	4100																																							
9	3100																																							
10	2100																																							
11	2500																																							
12	2200																																							
12.	ii)	Brief about the receptive field in RBF with architecture diagram and how it solves the non-linearity problem	4	CO2	L2																																			
13.		<p>Construct the MLP model with 3 inputs, 2 hidden neurons, and 1 output neuron with target value 1 & Learning Rate: 0.9 Input Value: $x_1=1, x_2=0, x_3=1$ Output Value: $y=1$ Bias Value: $\theta_4= -0.4, \theta_5= 0.2, \theta_6= 0.1$ Weights: $w_{14}= -0.4, w_{15}=-0.3,$ $w_{24}=0.4, w_{25}=0.1,$ $w_{34}=-0.5, w_{35}=0.2,$ $w_{46}=-0.3, w_{56}=-0.2$</p> <p>Find the error after forward pass and weight updates for w_{46} and w_{56} in the first iteration of back propagation.</p>	8	CO2	L3																																			

14.	Brief the Concept of PCA. Compute Principal components by applying the PCA algorithm to the following set of points: (4, 1), (2, 3), (5, 4), (1, 0). How many components can be finally kept as principal components? Justify the reason.	8	CO2	L4																																																																											
15.	Consider the following: Positively labelled data points: (3,1), (3,-1), (6,1), (6,-1) Negatively labelled data points: (1,0), (0,1), (0,-1), (-1,0) Draw an optimal hyperplane to classify the points in SVM.	8	CO4	L5																																																																											
16.	Maximize the value of the function $f(x) = -x^2 + 2x$. Over the range of real number from 0 to 2 with initial population 11010, 00111, 10110, 00101 with random number 0.4, 0.15, 0.7, 0.9. Select the crossover between the first and fifth digits	8	CO2	L3																																																																											
17.	Write short notes on the following in Reinforcement Learning a) Off Policy and On Policy decision Making b) Two ways of computing the Expected Reward/Value c) Different Methods for Action Selection Q(a)	8	CO3	L1																																																																											
18.	<p>The table below consists of training data. Calculate the most informative attribute as split attribute at the 1st level of Decision tree (Based on Information Gain).</p> <table border="1"> <thead> <tr> <th>Outlook</th><th>Temperature</th><th>Humidity</th><th>Windy</th><th>Class</th></tr> </thead> <tbody> <tr><td>Sunny</td><td>Hot</td><td>High</td><td>False</td><td>N</td></tr> <tr><td>Sunny</td><td>Hot</td><td>High</td><td>True</td><td>N</td></tr> <tr><td>Overcast</td><td>Hot</td><td>High</td><td>False</td><td>P</td></tr> <tr><td>Rain</td><td>Mild</td><td>High</td><td>False</td><td>P</td></tr> <tr><td>Rain</td><td>Cool</td><td>Normal</td><td>False</td><td>P</td></tr> <tr><td>Rain</td><td>Cool</td><td>Normal</td><td>True</td><td>N</td></tr> <tr><td>Overcast</td><td>Cool</td><td>Normal</td><td>True</td><td>P</td></tr> <tr><td>Sunny</td><td>Mild</td><td>High</td><td>False</td><td>N</td></tr> <tr><td>Sunny</td><td>Cool</td><td>Normal</td><td>False</td><td>P</td></tr> <tr><td>Rain</td><td>Mild</td><td>Normal</td><td>False</td><td>P</td></tr> <tr><td>Sunny</td><td>Mild</td><td>Normal</td><td>True</td><td>P</td></tr> <tr><td>Overcast</td><td>Mild</td><td>High</td><td>True</td><td>P</td></tr> <tr><td>Overcast</td><td>Hot</td><td>Normal</td><td>False</td><td>P</td></tr> <tr><td>Rain</td><td>Mild</td><td>High</td><td>True</td><td>N</td></tr> </tbody> </table>	Outlook	Temperature	Humidity	Windy	Class	Sunny	Hot	High	False	N	Sunny	Hot	High	True	N	Overcast	Hot	High	False	P	Rain	Mild	High	False	P	Rain	Cool	Normal	False	P	Rain	Cool	Normal	True	N	Overcast	Cool	Normal	True	P	Sunny	Mild	High	False	N	Sunny	Cool	Normal	False	P	Rain	Mild	Normal	False	P	Sunny	Mild	Normal	True	P	Overcast	Mild	High	True	P	Overcast	Hot	Normal	False	P	Rain	Mild	High	True	N	8	CO3	L5
Outlook	Temperature	Humidity	Windy	Class																																																																											
Sunny	Hot	High	False	N																																																																											
Sunny	Hot	High	True	N																																																																											
Overcast	Hot	High	False	P																																																																											
Rain	Mild	High	False	P																																																																											
Rain	Cool	Normal	False	P																																																																											
Rain	Cool	Normal	True	N																																																																											
Overcast	Cool	Normal	True	P																																																																											
Sunny	Mild	High	False	N																																																																											
Sunny	Cool	Normal	False	P																																																																											
Rain	Mild	Normal	False	P																																																																											
Sunny	Mild	Normal	True	P																																																																											
Overcast	Mild	High	True	P																																																																											
Overcast	Hot	Normal	False	P																																																																											
Rain	Mild	High	True	N																																																																											
19.	Cluster the following points (with (x, y) representing locations) into two clusters: A(2,2) B(3,2) C(1,1) D(3,1) E(1.5,0.5). Use K-Means Algorithm to find the two cluster centers after the 'second iteration'.	8	CO3	L5																																																																											
20.	Brief about Convolution, Pooling, Padding in CNN with suitable diagram and Explain the working principle of CNN. Describe about convolution operation in monochrome & colour image	8	CO5	L1																																																																											
21.	Explain the following types of Ensemble Learning: a) Bagging b) Boosting c) Random Forest	8	CO3	L2																																																																											

22	i)	Describe Bidirectional RNN with Computational model diagram	3	CO5	L1																																																																
22.	ii)	<p>Apply K nearest neighbour classifier to predict the class with the given features. Assume $k = 5$.</p> <p>Test Example: Sepal Length = 5.2; Sepal Width = 3.1; Class: ?</p> <table><tr><th>S.no</th><th>Sepal Length</th><th>Sepal Width</th><th>Species</th></tr><tr><td>1</td><td>5.3</td><td>3.7</td><td>Setosa</td></tr><tr><td>2</td><td>5.1</td><td>3.8</td><td>Setosa</td></tr><tr><td>3</td><td>7.2</td><td>3.0</td><td>Virginica</td></tr><tr><td>4</td><td>5.4</td><td>3.4</td><td>Setosa</td></tr><tr><td>5</td><td>5.1</td><td>3.3</td><td>Setosa</td></tr><tr><td>6</td><td>5.4</td><td>3.9</td><td>Setosa</td></tr><tr><td>7</td><td>7.4</td><td>2.8</td><td>Virginica</td></tr><tr><td>8</td><td>6.1</td><td>2.8</td><td>Versicolor</td></tr><tr><td>9</td><td>7.3</td><td>2.9</td><td>Virginica</td></tr><tr><td>10</td><td>6.0</td><td>2.7</td><td>Versicolor</td></tr><tr><td>11</td><td>5.8</td><td>2.8</td><td>Virginica</td></tr><tr><td>12</td><td>6.3</td><td>2.3</td><td>Versicolor</td></tr><tr><td>13</td><td>5.1</td><td>2.5</td><td>Versicolor</td></tr><tr><td>14</td><td>6.3</td><td>2.5</td><td>Versicolor</td></tr><tr><td>15</td><td>5.5</td><td>2.4</td><td>Versicolor</td></tr></table>	S.no	Sepal Length	Sepal Width	Species	1	5.3	3.7	Setosa	2	5.1	3.8	Setosa	3	7.2	3.0	Virginica	4	5.4	3.4	Setosa	5	5.1	3.3	Setosa	6	5.4	3.9	Setosa	7	7.4	2.8	Virginica	8	6.1	2.8	Versicolor	9	7.3	2.9	Virginica	10	6.0	2.7	Versicolor	11	5.8	2.8	Virginica	12	6.3	2.3	Versicolor	13	5.1	2.5	Versicolor	14	6.3	2.5	Versicolor	15	5.5	2.4	Versicolor	5	CO4	L5
S.no	Sepal Length	Sepal Width	Species																																																																		
1	5.3	3.7	Setosa																																																																		
2	5.1	3.8	Setosa																																																																		
3	7.2	3.0	Virginica																																																																		
4	5.4	3.4	Setosa																																																																		
5	5.1	3.3	Setosa																																																																		
6	5.4	3.9	Setosa																																																																		
7	7.4	2.8	Virginica																																																																		
8	6.1	2.8	Versicolor																																																																		
9	7.3	2.9	Virginica																																																																		
10	6.0	2.7	Versicolor																																																																		
11	5.8	2.8	Virginica																																																																		
12	6.3	2.3	Versicolor																																																																		
13	5.1	2.5	Versicolor																																																																		
14	6.3	2.5	Versicolor																																																																		
15	5.5	2.4	Versicolor																																																																		

PART – C (2 x 8 = 16marks)

		Marks	CO	BL						
23.	Write Find S algorithm. Apply Find S algorithm and write down the hypothesis each time after observing an example.	8	CO1	L5						
	eg				citations	size	inLibrary	price	editions	buy
	1				some	small	no	affordable	many	no
	2				many	big	no	expensive	one	yes
	3				some	big	always	expensive	few	no
	4				many	medium	no	expensive	many	yes
	5				many	small	no	affordable	many	yes
24.	Brief the Concept of LDA and Apply LDA to the following set of points: (4,1),(2,4),(2,3),(3,6),(4,4) belongs to Class 1 and (9,10),(6,8),(9,5),(8,7),(10,8) belongs to Class 2.	8	CO3	L5
