ANNA UNIVERSITY (UNIVERSITY DEPARTMENTS)

APRIL/MAY 2025

B.E. /B.Tech / B. Arch (Full Time) - END SEMESTER EXAMINATIONS,

INFORMATION TECHNOLOGY

Sixth Semester

IT 5036 Machine Learning

(Regulation 2019)

Time: 3hrs

Max. Marks: 100

CO1	Choose and implement classification or regression algorithms for an application using an open-source tool.
CO2	Implement probabilistic discriminative and generative algorithms for an application and analyse the results.
CO3	Use a tool to implement typical clustering algorithms for different types of applications.
CO4	Design and implement an HMM for a sequence model type of application.
CO5	Implement appropriate learning algorithms for any real-time application using an open-source tool.

**BL – Bloom's Taxonomy Levels**

(L1-Remembering, L2-Understanding, L3-Appling, L4-Analysing, L5-Evaluating, L6-Creating)

**PART- A(10x2=20Marks)**  
(Answer all Questions)

Q.No.	Questions	Marks	CO	BL
1	Identify the two main sources of error in the bias-variance tradeoff.	2	1	L1
2	List the main types of machine learning based on how models learn from data.	2	1	L1
3	Given a dataset with features such as area, number of bedrooms, and age of the house, explain why linear regression might not always give accurate predictions for house prices. Mention any assumptions involved.	2	2	L2
4	Justify how the KNN algorithm classifies a new data point and explain the role of the parameter 'k' in influencing the result.	2	2	L2
5	How are core points, border points, and outlier points determined in DBSCAN using $\epsilon$ (epsilon) and MinPts? What conditions define each type of point during clustering?	2	3	L2
6	Find the Euclidean and Manhattan distances between the points A(2, 3) and B(7, 8); what does each distance indicate about how the points are spaced?	2	3	L2
7	Name the key components of a Bayesian Network.	2	4	L1
8	Differentiate the assumptions about dependencies that differs between Bayesian Networks and Markov Models and how this affects their use in modelling real-world problems.	2	4	L1
9	State how an agent in reinforcement learning learns from its environment, and describe the role of rewards in shaping its behaviour.	2	5	L1

10	Describe how ensemble learning improves prediction performance and explain why combining multiple models can be more effective than using a single model.	2	5	L1
----	---	---	---	----

**PART- B(5x 13=65Marks)**  
(Restrict to a maximum of 2 subdivisions)

Q.No.	Questions	Marks	CO	BL																																			
11 (a)	<div>1. Given a dataset with customer purchase records, outline the steps one would take to build a machine-learning model to predict future purchases. Explain how you would apply the machine learning process in this case.</div> <div>2. A retail company wants to improve customer experience. Apply your knowledge of supervised, unsupervised, and reinforcement learning to suggest a suitable machine learning type for each of the following tasks: predicting customer churn, segmenting customers by behaviour, and optimising website layout based on user interaction.</div>	<div>6</div> <div>7</div>	1	L3																																			
OR																																							
11 (b)	<div>Apply the Find-S algorithm to the following training data to determine the final hypothesis for the concept 'EnjoySport'. Write the algorithm and explain it step by step with respect to the algorithm.</div> <table><tr><th>Sky</th><th>AirTemp</th><th>Humidity</th><th>Wind</th><th>Water</th><th>Forecast</th><th>EnjoySport</th></tr><tr><td>Sunny</td><td>Warm</td><td>Normal</td><td>Strong</td><td>Warm</td><td>Same</td><td>Yes</td></tr><tr><td>Sunny</td><td>Warm</td><td>High</td><td>Strong</td><td>Warm</td><td>Same</td><td>Yes</td></tr><tr><td>Rainy</td><td>Cold</td><td>High</td><td>Strong</td><td>Warm</td><td>Change</td><td>No</td></tr><tr><td>Sunny</td><td>Warm</td><td>High</td><td>Strong</td><td>Cool</td><td>Change</td><td>Yes</td></tr></table> <div>b. Use the candidate elimination method and explain the differences between Find-S and the Candidate elimination method. Write the algorithm and explain it step by step with respect to the algorithm.</div>	Sky	AirTemp	Humidity	Wind	Water	Forecast	EnjoySport	Sunny	Warm	Normal	Strong	Warm	Same	Yes	Sunny	Warm	High	Strong	Warm	Same	Yes	Rainy	Cold	High	Strong	Warm	Change	No	Sunny	Warm	High	Strong	Cool	Change	Yes	6+7	1	L3
