ANNA UNIVERSITY (UNIVERSITY DEPARTMENTS)

B.E. / B. Tech. END SEMESTER EXAMINATIONS, NOV/DEC 2024

INFORMATION TECHNOLOGY

IT7702 – Data Analytics

(Regulation 2015)

Time: 3hrs

Max. Marks: 100

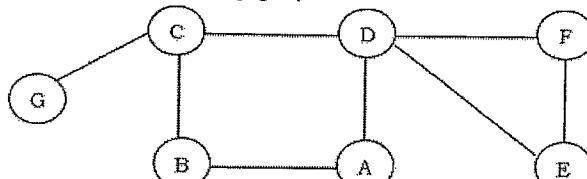

PART- A (10 x 2 = 20 Marks)

(Answer all Questions)

| Q. No | Questions | Marks |
|-------|--|-------|
| 1 | What is big data? List its characteristics. | 2 |
| 2 | How reporting is different from analytics? | 2 |
| 3 | What is a kernel function? Mention any two kernel functions and its applications. | 2 |
| 4 | Give the differences between correlation and co-variance and also mention their usage in analytics. | 2 |
| 5 | What is a data node in Hadoop? Give its functions. | 2 |
| 6 | Mention any two important Map Reduce features that make it best for handling big data and state how. | 2 |
| 7 | Write the steps involved in the compilation of Hive query with an example. | 2 |
| 8 | Write the command(s) in R to read data from a data frame and display the column heading if available. | 2 |
| 9 | What is stream data? How it is different from traditional data? | 2 |
| 10 | Mention any four applications where stream data is used and state how it is handled in those applications. | 2 |

PART- B (5 x 13 = 65 Marks)

| Q. No | Questions | Marks |
|------------|---|-------|
| 11 (a) (i) | Illustrate with necessary diagrams, features, pros and cons the different types of analytical sandbox configurations. | 13 |
| OR | | |
| 11 (b) (i) | Identify, justify and explain apt sampling technique for the following scenarios: (I) A state's census data must be divided district wise and each district data must be treated as an independent population. (II) A small sized temperature data collected inside a car that is readily available and homogenous in nature. (III) Arranging the queries that hit a search engine based on time and then select every 10 th query. | 9 |

| | | |
|------------|--|----|
| | (ii) State the null and alternative hypotheses for the following: (I) In a population of fish, approximately 42% are female. A test is conducted to see if, in fact, the proportion is less. (II) Twenty-nine percent of under-graduate students studying in a college get infected by flu each month. | 4 |
| 12 (a) (i) | Consider the following graph:  Define and calculate the following for all the nodes: Eccentricity, Closeness and Betweenness. | 9 |
| (ii) | What is SSR, SSE and SST in regression analysis? Show mathematically the relationship between these metrics. | 4 |
| OR | | |
| 12 (b) (i) | Calculate Eigen values and Eigen vectors for the matrix data given below. $A = \begin{pmatrix} 4 & 0 \\ 3 & -5 \end{pmatrix}$ Also explain how the derived Eigen vectors can be used for singular value decomposition. | 13 |
| 13 (a) (i) | Draw the HDFS architecture and brief about the components, features and working of Hadoop with relevant example. | 13 |
| OR | | |
| 13 (b) (i) | Explain how various relational algebraic operations can be represented as map and reduce functions. | 13 |
| 14 (a) (i) | Compare and contrast the features of various types of NoSQL databases with relevant examples. | 13 |
| OR | | |
| 14 (b) (i) | Explain different types of graph plots used for univariate and bivariate analysis with relevant R commands and examples. | 13 |
| 15 (a) (i) | Discuss about the various sampling approaches used to perform stream data analytics with relevant real time examples. Also show mathematically how the sample sizes are determined. | 13 |
| OR | | |
| 15 (b) (i) | State the rules of DGIM algorithm for counting the number of ones in a bit-stream. Consider the following stream: 101011000101110110010110. Divide the given stream into buckets as per DGIM rules and give the modified buckets after a new bit 1 arrives in the stream: | 13 |

PART- C (1 x 15 = 15 Marks)
 (Q.No.16 is compulsory)

| Q. No | Questions | Marks | | | | | | | | | | |
|---------------|---|--------------|-----|-----|---|----|---------------|-----|-----|-----|-----|---|
| 16. | <p>Consider the following data where x is the time in years which an employee spend in a company and y is the hourly pay in rupees for 5 employees:</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <tr> <td style="padding: 2px;">X (in years)</td><td style="padding: 2px;">5</td><td style="padding: 2px;">3</td><td style="padding: 2px;">4</td><td style="padding: 2px;">10</td></tr> <tr> <td style="padding: 2px;">Y (in rupees)</td><td style="padding: 2px;">250</td><td style="padding: 2px;">200</td><td style="padding: 2px;">210</td><td style="padding: 2px;">350</td></tr> </table> <p>Calculate the following:</p> <ul style="list-style-type: none"> (i) Mean, variance and standard deviation for X and Y (ii) Covariance matrix (iii) Apply linear regression modeling and give your inferences on the association between X and Y. | X (in years) | 5 | 3 | 4 | 10 | Y (in rupees) | 250 | 200 | 210 | 350 | 6 4 5 |
| X (in years) | 5 | 3 | 4 | 10 | | | | | | | | |
| Y (in rupees) | 250 | 200 | 210 | 350 | | | | | | | | |
